

### Lab Exercise 9 – October 2020

Programme	: B.Tech(CSE)	Semester	: FS 2020-21
Course Title	: Internet and Web Programming Lab	Code	: CSE3002
		Class Nbr(s)	:
Faculty(s)	: Dr. Leninisha Shanmugam & Dr.Shivani Gupta	Slot	L34+L35
Date	: 8/10/2020		

#### Basic Experiments on PHP

Q.No.	Question Description	Marks
1.	Write a PHP program to Open a text file named new.txt. In case such a file does not exist, your program should produce an error message and then create the file. Now, append the data <b>Hi! How are you?</b> to that file. Count the number of lines and paragraphs in that file and print it. For every word in the file, count and print on a web page how many times the word appears in the file.	5
2.	Write a PHP code to create a simple shopping cart <ul style="list-style-type: none"><li>• create a login screen with username, password, remember (checkbox) &amp; Login button.</li><li>• If user select 'remember' functionality, save username &amp; password in cookies</li><li>• When Login Form loads, show recently saved username &amp; password from the cookies</li><li>• If user do not select 'remember', cookies will be deleted</li><li>• Every page should display a welcome message with name</li><li>• Give provision to add items to cart, webpage must remember the items for next visit of the page</li><li>• On click the buying option should prepare the bill.</li></ul>	5
